"broken testa", in relation to dry beans, means that a portion of the testa has broken off;

"cracked", in relation to dry beans, means that the testa is clearly cracked for a distance of more than one-third of the circumference of the dry bean taken at right angles to the longitudinal axis;

"dangerous objects", in relation to dry beans, means any glass or metal objects such as nails or wire, which make the handling or consumption of dry beans containing such objects, dangerous;

opsigtelik benadeel word: Met dien verstande dat die volgende gebrekkige droëbone nie as gebrekkige droëbone van ernstige intensiteit beskou word nie:

Onttrek klein hoeveelhede droëbone op verskillende hoogtes uit elke houer bevattende droëbone met die hand of met 'n graansteker wat diep in die houer gesteek word. Indien die monsters droëbone wat so verkry word van verskillende houers—

(a) oor die algemeen van dieselfde voorkoms is, moet dit in 'n vergaarbak saamgegooi en deeglik gemeng word waarna die klas en graad van die gemengde monster droëbone bepaal word;

Deviations

5. The maximum allowable deviations from the requirements set out in regulation 4 in respect of any of the named grades of dry beans, as the case may be, are as follows:

Maksimum persentasie toelaatbare afwykings (m/m)

Graad 1	Graad 2	Graad 3	Graad 4	Graad 5	Graad 6

Provided that dry beans which do not comply with the requirements set out in regulations 4 and 5 shall be considered to be Undergrade.

PART III**SAMPLING***General*

6. For the purposes of determining the class and grade of dry beans, samples of the dry beans shall be abstracted as follows:

Abstract small quantities of dry beans at various heights from every container containing dry beans by hand or by probe which probe shall be pushed deeply into the container. If the sample of dry beans which is so abstracted from various containers is—

(a) generally of the same appearance, it shall be placed in a receptacle and thoroughly mixed, whereafter the class and grade of the mixed sample of dry beans are determined;

(b) oor die algemeen nie van dieselfde voorkoms is nie word die monster droëbone vir elke sodanige houer afsonderlik geklassifiseer en gegradeer.

DEEL IV

BEPALING VAN PERSENTASIE AFWYKINGS

7. (1) Die persentasie afwykings in 'n hoeveelheid droëbone word bepaal soos in hierdie regulasie uiteengesit.

(2) *Bepaling van persentasie vreemde voorwerpe.*—(a) Meet 1 kg droëbone af uit 'n monster verkry op die wyse voorgeskryf in regulasie 6;

(2) Indien die resultaat van 'n ontleding van 'n monster met minder as die volgende van die toelaatbare afwyking verskil, soos in onderstaande tabel aangetoon, hetby dit binne die limiete is, of dat die limiete oorskry word, moet 'n tweede ontleding op dieselfde monster gedoen word ten einde die resultaat van die eerste ontleding te kontroleer:

Toelaatbare afwyking	Verskil ten opsigte van afwyking	%
Tot en met 0,25 persent.....	0,1	
Meer as 0,25 persent maar hoogstens 1,5 persent.....	0,25

Meer as 5 persent.....	1,0	

(3) Indien die resultaat van die tweede bepaling die droëbone in 'n hoër of laer graad plaas moet 'n verdere twee ontledings uit 'n addisionele monster droëbone gedoen word: Met dien verstande dat die gemiddelde resultaat van al sodanige ontledings as resultaat ten opsigte van die droëbone geld.

Up to and including 0,25 per cent.....	0,1
Exceeding 0,25 per cent but not exceeding 1,5 per cent.....	0,25
Exceeding 1,5 per cent but not exceeding 5 per cent.....	0,5

(3) If as a result of the second analysis the dry beans are in a higher or lower grade a further two analysis shall be made from an additional sample: Provided that the average of the results of all such analyses shall be valid in respect of the dry beans.

PART VI

DETERMINATION OF MOISTURE CONTENT

General

9. The moisture content of dry beans shall be determined by the Marconi electrical resistance method as described in this part.

Sample

10. A sample of at least 70 g and of not more than 80 g dry beans shall be taken from a sample obtained in the manner prescribed in regulation 6, from which the foreign matter, defective dry beans and dry beans of other classes have previously been removed.

- (a) A Marconi moisture meter model TF 933 or TF 933 A or TF 933 B;
- (b) a coffee mill or Alexander Work No. 466 mill or Philips electrical mill or any other suitable mill;
- (c) a glass jar with a screw cap and with a capacity of at least 350 ml and not exceeding 450 ml;
- (d) a 12-mesh sieve; and
- (e) a 18-mesh sieve.

Grinding of Sample

12. The sample of dry beans obtained as prescribed in regulation 10 shall be ground as follows:

- (a) The mill shall be set to obtain the prescribed degree of fineness of the milled product;
- (b) the mill shall be operated at a uniform speed;
- (c) the milling process shall last at least 30 seconds and not more than 90 seconds;
- (d) the milled product shall pass through a 12-mesh sieve but not through a 18-mesh sieve;
- (e) for the purposes of paragraph (d) the size of the milled tests shall not be taken into account; and
- (f) the milled product shall immediately be transferred to the glass jar and after the lid has been screwed on properly the milled product shall be thoroughly mixed by shaking the jar for at least 30 seconds.

Metode

13. Onmiddellik nadat die monster in regulasie 12 genoem, gereed is, moet die druksel van die Marconi-apparaat omtrent halfvol gemaak word met die gemaalde monster en die metaaldrukprop daarop in posisie geplaas word. Daar moet gesorg word dat die monster gelyk in die sel lê en dat die onderdele van die sel behoorlik inmekaar pas. Die sel moet slegs aan die buitenste isolermateriaal daarom gehanteer word. Onmiddellik daarna moet die sel (met die metaaldrukprop na bo) in die klamp wat deel van die Marconi-apparaat uitmaak, geplaas en daarin vasgeskroef word totdat die twee dele van die silindervormige veeromhulsel wat met die skroef verbind is, bo gelyk is. Die klamp met die sel daarin vasgeskroef moet korrek met die hooftoestel elektries verbind wees. Die skakelaar moet na die "zero"-posisie gedraai word en daarna moet die galvanometernaald deur middel van die stelknoppie bokant die wyerskywe gestel word totdat die naald presies regoor die horizontale strepie te staan kom. Wanneer hierdie "zero"-instelling gemaak word, moet die linkerhandse wyerskywe op een van die posisies een tot vyf staan. Die skakelaar moet daarna na die "lees"-posisie gedraai word en die wyerskywe onmiddellik daarna gestel word totdat die galvanometernaald terugkeer na die posisie regoor die horizontale strepie. Die lesing op die wyerskywe moet nou geneem word en die temperatuur op die termometer wat aan die hooftoestel geheg is, tot die naaste graad afgelees word. Enige geleidelike verskuiwing van die naald nadat dit aanvanklik korrek ingestel is, moet buite rekening gelaat word. Vanaf die stadium wanneer die monster in die sel geplaas word totdat die finale lesing op die wyerskywe geneem word, mag hoogstens een minuut verloop. Waar moontlik word lesings slegs op die swart of positiewe waardes van die wyerskywe geneem. Die lesing op die wyerskywe moet herlei word tot persentasies volgens onderstaande tabel:

Method

13. Immediately after the sample mentioned in regulation 12 is ready the pressure cell of the Marconi apparatus shall be filled approximately half full with the milled sample and the metal plunger shall be placed into position on it. Care shall be taken to ensure that the surface of the sample is level in the cell and that the parts of the cell fit properly into each other. The cell shall be handled only by the outer insulating material surrounding it. Immediately thereafter the cell (with the metal plunger facing upwards) shall be fitted into the clamp which forms part of the Marconi apparatus and screwed tight until the two parts of the cylindrical spring housing mounted on the screw are flush. The clamp containing the cell shall have proper electrical contact with the main apparatus. The switch shall now be turned to the "zero" position and the galvanometer pointer shall thereafter be adjusted by means of the "set-zero" knob above the dials until the pointer is exactly opposite the horizontal line. When setting to "zero", the left hand dial shall be at any one of the positions 1 to 5. The switch shall then be turned to the "read" position and the dials immediately adjusted until the galvanometer pointer returns to the position of the horizontal line. The dial reading shall now be taken and the temperature to the nearest degree, be read from the thermometer attached to the main apparatus. Any gradual movement of the pointer, after having been correctly adjusted, shall be disregarded. Not more than one minute shall elapse between the placing of the samples into the cell and the taking of the final dial reading.

Where possible, readings shall only be taken on the black or positive value of the dials. Dial readings shall be converted into percentages according to the following table:

Die resultaat aldus verkry moet vir temperatuur aangesuiwer word deur dit met 0,05 persent te verminder vir elke graad Celsius wat die termometer lesing onder 20 °C is en met 0,05 persent te verminder vir elke graad Celsius wat die termometer lesing bo 20 °C is.

Herhaling van Toets

14. Indien die resultaat van 'n toets minder as 0,3 persent bo of onder die maksimum toegewing vir voggehalte, naamlik 14 persent, is, moet die toets herhaal word op dieselfde monster. Voordat droëbone as monstergraad gegradeer mag word, moet 'n addisionele monster getoets word. Die gemiddelde van die toetse sal geld as die voggehalte van die droëbone.

Voorsorgmaatreëls

15. Daar moet gesorg word dat die meul waarmee die monster droëbone gemaal word, die fles waarin dit vermeng word en die sel van die apparaat behoorlik skoon en droog is voor elke bepaling van die voggehalte.

Die vogmeter moet in ewewig met die temperatuur van die omringende lug wees om die ontwikkeling van termoelektriese stroompies in die instrument, waardeur foute in die wyserskyflesing veroorsaak kan word, te verhoed. Om hierdie rede is dit gebiedend dat die vogmeter vir 'n geruime tyd op een plek sal bly staan voordat 'n vogtoets gedoen word.

Indien die vogmeter om een of ander spesiale rede na 'n ander posisie of 'n ander lokaliteit verskuif moet word, moet dit vir minstens 'n uur in die nuwe posisie met rus gelaat word sodat die instrument kans kry om in hittewewig met die omringende lug te kom voordat 'n vogtoets gedoen word. Indien dit nie moontlik is om die termometer aan die kas van die instrument te heg nie, moet dit in 'n gerieflike horizontale posisie bo-op die apparaat geplaas word, minstens 15 minute voordat 'n vogtoets gedoen word. Ook in die gevalle waar die termometer aan die kas geheg kan word, maar dit nie permanent in daardie posisie gehou word nie, moet dit in daardie posisie geplaas word minstens 15 minute voordat 'n vogtoets gedoen word.

Toets van Marconi-apparaat

16. Wanneer 'n vogbepaling deur middel van hierdie metode gedoen word, moet gesorg word dat die apparaat in goeie werkende toestand is deur met 'n kort stukkie draad 'n kortsluiting in die twee boonste steeksokke op die hooftoestel te maak en daarne die skakelaar op "zero" en die galvanometernaald regoor die horizontale strepie in te stel. Nadat die skakelaar op die "lees"-posisie gestel is moet die lesing op die wyserskywe, geneem op die wyse hierbo omskryf, ongeveer 60 wees. Die draad moet dan verwyder word. Hierna moet die klamp, elektries volgens voorskrif met die hooftoestel verbind word, die skakelaar op "zero" en die galvanometernaald regoor die horizontale strepie ingestel en die basis van die druksel in sy normale posisie in die klamp gehou word. 'n Stukkie metaaldraad of silverpapier (tinfolie) moet dwarsoor die blootgestelde

The result thus obtained shall be corrected for temperature by increasing it by 0,05 per cent for each degree centigrade the temperature reading is below 20 °C and by decreasing it by 0,05 per cent for each degree centigrade the temperature is above 20 °C.

Repetition of Tests

14. In the event of the result of a test being less than 0,3 per cent below or above the maximum tolerance, namely 14 per cent, the test shall be repeated on the same sample. Before a consignment may be rejected, an additional sample shall be tested. The average of the tests shall be regarded as the moisture content of the dry beans.

Precautionary Measures

15. Care shall be taken that the mill used for the grinding of the sample of dry beans, the jar used for mixing the sample and the pressure cell of the apparatus are clean and dry before each moisture determination is commenced.

The moisture meter has to be in equilibrium with the temperature of the ambient air in order to obviate the generation of thermo-electric currents in the instrument which may cause errors in the dial reading. For this reason it is imperative that the moisture meter should remain in one position for an appreciable time before a moisture test is carried out. If for some special reason the moisture meter has to be moved to another position or some other locality, it must be left undisturbed for at least one hour in the new position to allow the instrument to come into thermal equilibrium with the ambient air before a moisture test is carried out. If it is not possible to affix the thermometer to the case of the instrument, it must be placed in a convenient horizontal position on top of the apparatus at least 15 minutes before a moisture test is carried out. In those cases too where the thermometer can be affixed to the apparatus but does not remain in that position permanently, it must be placed in that position at least 15 minutes before a moisture test is carried out.

Testing of Marconi Apparatus

16. When a moisture determination is made by means of this method, it must be seen to that the apparatus is in good working order by short circuiting the two top-most sockets on the main apparatus with a short piece of wire, and turning the switch to "zero" and adjusting the galvanometer pointer until it is opposite the horizontal line. After the switch has been turned to "read", the reading on the dials, taken in the manner described above, should be approximately 60. The wire shall then be removed. Thereafter the clamp shall be connected electrically with the main apparatus as prescribed, the switch turned to "zero", the galvanometer pointer adjusted to the position opposite the horizontal line and the base of the pressure cell kept in its normal position in the clamp. A piece of metal wire or silver paper (tin foil) shall be

Nadat die skakelaar op die "lees"-posisie gestel is, moet die lesing op die wierskywe, geneem op die wyse hierbo omskryf, ongeveer 60 wees. Daarna moet die basis en isoleerrings van die druksel sonder die metaaldrukprop in die klamp vasgeskoef word totdat dit net stewig in posisie bly en die skakelaar op "zero" en die galvanometernaald regoor die horizontale strepie ingestel word. Nadat die skakelaar op die "lees"-posisie gestel is, moet die lesing op die wierskywe in hierdie geval nul of laer as nul wees, maar indien die lesing hoer as nul is, moet die basis van die druksel vir 'n paar minute in die son of in redelike warm lug geplaas en die toets herhaal word.

placed across the exposed electrodes (the metal parts) of the pressure cell and pressed down so as to cause a short circuit. After the switch has been turned to "read", the dial reading, taken in the manner described above, should be approximately 60. Thereafter the base and the insular ring of the pressure cell shall be placed in the clamp and screwed down without the plunger until they just fit tightly, the switch turned to "zero" and the galvanometer pointer adjusted to the position opposite the horizontal line. After the switch has been turned to "read", the reading on the dials in this instance would be nil or lower but if the reading is higher than nil, the base of the pressure cell must be exposed to sunlight or reasonable warm air for a few minutes after which the test shall be repeated.
